PROFILE

Hi there. I am Shihab and I am a Frontend web developer. I love to build beautiful websites for companies and professionals. I am an open-source contributor and a learner. I am proficient in Frontend Technologies such as JavaScript and React. I am willing to collaborate on cool projects and I want to become the best developer in this field.

PROJECTS

RevIt landing Page
landing page for a company
2030 - PRESENT

This is a demo landing page for an IT solution company. I created this landing page using SASS(mainly). It is divided into 10 sections (including the navbar).

TV show search
An app that delivers all the matched shows from an API
2025 - 2029

- This is a TV show search app. Give it any kind of TV show name to input, and it will show all the shows containing the same name.br
- I've used JavaScript Async-Await functions and some Dom manipulation to make this. Also, Styled it using CSS

ColorZapp
A Color generating app that delivers the informations of that color

- ColorZapp is a color-generating web-based application built with HTML, CSS, and JavaScript.
2024 - 2025
- In this app, users can generate a random color by clicking "Generate Color," the color will be displayed in the box below the button. Additionally, the User can copy that color's RGB and HEX code. The red, green, and blue toggles are for adjusting the color. This app also has a dark mode option.
